Pozzi Orthodontics Expanders

POZZI® MICRO-EXPANDER

The Pozzi Micro-Expander are available in 8mm and 12mm sizes. Featuring a slim design unmatched by other rapid expanders. These unique devices have 2 extra-long arms, allowing for the possibility of anterior support and ensuring excellent stability and maximum comfort in any configuration. The expander can be placed in the standard position, with a laser-marked arrow and max-expansion length visible to the user, or in the upside-down position, indicated by laser-marked arrows, to reduce the space occupied by the expander arms if the jaw is especially narrow. The Pozzi Micro-Expander can also be used to obtain dental expansion in the lower jaw. Supplied with a BP Palatal Expander Key.

- It can be positioned in the standard way, i.e. with the markings of the arrow and maximum expansion visible
- It can also be positioned upside down in case of very narrow palates, to minimize the bulkiness of the arms once they are bent.

POZZI® EXPANDER FOR LOWER ARCH

The Pozzi Expander for Lower Arch for Lower Arch is a specialized design to accommodate the needs of the orthodontic specialists. These Expanders may be fabricated on the lingual surface of either of the maxillary of the mandibular arch for expansion on distalization. The overall width has been reduced resulting in an improved fit, allowing for a more comfortable appliance in the patient's mouth. Supplied with a BP Palatal Expander Key.

Pozzi Orthodontics Expanders

POZZI® RAPID TELESCOPIC EXPANDER

The Pozzi Rapid Telescopic Expander guides create constant friction during the expansion movement. This expander is ideal for very narrow palates. The expanders with 9mm, 11mm and 13mm sizes feature a compact design for ease of arm bending and reducing the overall dimensions of the device. Supplied with a BP Palatal Expander Key. Packs of 1

POZZI® EXPANDER WITH ORTHOGONAL ARMS

The Pozzi Expander with Orthogonal Arms is used to obtain distal, mesial, and sagittal expansion movement in the treatment of Class II and Class malocclusions. It is an ideal solution for patients needing orthopaedic maxillary expansion. Supplied with a BP Palatal Expander Key.

- Available in two expansion capacities for every therapeutic need.
- High stability, comfort, and safety.
- Optimal positioning using orthogonal position of bending arms, reduces the device size.
- Palatal Expander Key included, allows easy intraoral activation by the patient.
- Micro-machined guide pins providing mechanical friction throughout treatment.
- End-stop limits the possibility of over-treatment.

Leonardo Rapid Palatal Expander

LEONARDO is a rapid palatal expander with innovative features for safer, easier, and more effective use. The telescopic guides of the expander's body remain overlapped - even at its maximum opening - to ensure rigidity, stability, and expansion precision. The arms are laser welded to maximize the resistance to torsion and compression and prevent breakage. The arm's housing is designed with no cavities or blind parts, guaranteeing maximum hygiene. The mechanical locking and anti-return system prevent unintentional disassembly. International patents protect the Leonardo rapid expander.

XP Rapid Palatal Expander

The XP line of RPE, made of medical-grade stainless steel, is designed to meet the most demanding accuracy requirements, stability, and comfort. Its compact size and the chamfered shape, make it comfortable for the patient and also suitable in cases with limited space. XP's fully mechanical friction system allows expansion control avoiding the spin-back effect. The XP series doesn't use any chemical components for friction control being completely safe for the patient.

Main Features:

HOUSING OF THE ARMS IN A SINGLE PIECE BUILT: The arms are made of soft and solid steel to allow accuracy in the bending and stability in the use.

LASER WELDING OF THE ARMS: Their U-shape and the laser welding in the single-piece housing, ensure high torsion and compression resistance, eliminating risks of accidental breakage.

FUNNEL SHAPED INSERTION HOLE: The activation hole has been designed with a generous flaring funnel, to make it easier for the user to insert the expansion key.

The Advantages

- ✓ **Control of the molar-canine segment.** The connection system has been designed with tight tolerances to increase treatment effectiveness by minimizing unwanted inter-arches or cuspids movements.
- ✓ **Effectiveness.** The position of the hook on the canine's mesial side increases the appliance's effectiveness by increasing horizontal forces compared to vertical extrusion.
- ✓ **Easy positioning.** The mesiodistal and occlusal-gingival positioning lines facilitate the positioning of the socket on the tooth.
- ✓ **Treatment time reduction.** Using a D-bar improves the molar relationship making the orthodontic treatment faster.
- ✓ **Comfort.** Its smooth and low-profile design improves patient comfort and compliance during treatment.

Expansion Screw Palatal Split

Hyrax type expansion screws are indicated to correct poor maxillomandibular relations. The most common clinical situations to apply are:

- Mixed/early permanent dentition cases.
- Posterosuperior bilateral crossbite, as a result of deficiency of the maxilla apical base.
- Anterior or posterior crossbites that are not too severe.

Pozzi Stainless Steel Bands

Easy Stretch Pozzi Molar Bands

The Pozzi series of molar bands are fully proportional in all dimensions; diameter, height and thickness, to provide maximum strength and to prevent cement washout due to gaping. Pozzi bands are designed with a regular temper to allow for easier "stretch" adaptation. They are available in separate lefts and rights for better seating and a closer adaptation to the natural anatomy. Pozzi bands utilize Unitek® standard sizing, making switching easy and painless. If you are tired of paying high prices for your bands, then the Pozzi line is perfect for you!

Pozzi Stainless Steel Crowns

This stainless steel crown line is manufactured to meet the needs of all facets of dentistry. The posterior molar crowns are designed with a shallow occlusal anatomy, allowing for more healthy tooth structure after tooth reduction. The shallow occlusal cusps permit complete compatibility with opposing teeth and reduced cuspal interference during normal mastication. The crowns are parallel on the mesial and distal walls. Unlike bell-shaped crowns, these crowns will not rock or cause separation when two or more adjoining crowns are used. We have made these crowns with a thickness that prevents occlusal wear-through that sometimes occurs with the use of thinner crowns. Unlike some of the other crowns made with thinner and less durable materials, our crowns may be welded too. These are the crowns you want for making

space maintainers or Herbst appliances, or for a semipermanent restoration. Through our own research, we have determined these crowns to be of the ideal length: short enough to eliminate excess crown trimming, and long enough to provide optimum length and contour. To make our line complete to the user, we offer first and second primary molars, first and second permanent molars and first and second bicuspid. Pozzi Style 2000 crowns are a match for Unitek® Crowns. The Pozzi® Crown numbers and sizes are the same as Unitek®. Unitek® is not a trademark of American Tooth Industries.

Pozzi® Space Maintainers

These preformed components are available to the laboratory that chooses to form a custom band or crown space maintainer. You simply solder the tube to the band/crown, insert the maintainer rest into the tubing, and crimp it at the desired point. Your doctor can even do the crimping in the office, thereby eliminating any chance of misfitting.

Pozzi® Retainer Wire (Medical Specification)

Diamond drawn: yields a perfectly round wire.

- Medium hard temper: a true 1/2 hard wire.
- Easily formed: ideal for hand forming.
- Non-brittle: can be bent 12-14 times before breaking to prevent remakes.

Pozzi® Standard Round Wire (Medical Specification)

- High Elasticity, which permits greater manipulation of this 3/4 hard wire without danger of cracking or breaking.
- High yield point which gives the wire a greater resistance to permanent deformation.
- Uniform mechanical properties from wire to wire and batch to batch.
- Packaged in 10 - 14" straight lengths per tube. When ordering please specify item number and size.

Pozzi® Cobalt Clasp Crozat Wire (Medical Specification)

- Chromium cobalt alloy. Specifically designed for the Crozat method and for fabrication of the OSAYS appliance.
- Heat-treatable: May be soldered in open flame.
- Available in 15-23 gauge.
- Coiled spools. A softer, more malleable wire saves time when making intricate bends.

Pozzi® Standard Round Wire (Medical Specification)

- 3/4 hard wire for those who want more spring to their wire.
- Surgical-grade stainless steel.
- Spooled wire allows for increased tensile strength and less waste.

Pozzi Super BP Ball Clasp - Series 2000

This improved ball clasp is made of high-grade #304 stainless steel wire and accepts severe bends without fracturing. The round head is approximately twice the diameter of the wire shaft and will not irritate tissue. These clasps are made from diamond-drawn wire and have a bright, clean finish. In our opinion, other ball clasps on the market today have a lower tensile strength and an oval-shaped head that does not possess adequate retention required by retainers. If you are looking for a better ball clasp to give superior retention on your removable appliances, try the 2000 series.

Available in three sizes.

GROUP/ITEM #	DESCRIPTION

Pozziloy (Medical Specification)

Pozziloy retainer wire, is our own special formulation of nickel cobalt wire, available in a blue, soft, heat-treatable (1400/1600 N/sq.mm) tensile. This chromium-cobalt base alloy is highly stainless and mechanically more resistant to breakage. Each wire is color coded blue at the tip, and is 14 inches in length. This wire is made from a vacuum-fused alloy, diamond-drawn to obtain leveled and highly resistant forces. Packaged in a ten pack, it is available in .028, .030, .032 and .036.

Pozzi® Wire & Sheet Metal Gauge Precision Instrument

Light-weight stainless steel. Measures round and rectangular wire with gauge and inch sizes. The only device which helps to verify sizes and maintains quality control. The wire gauge is a template which is used to measure the gauge or thickness of sheet metal or wire. Around the edge are graduated, numbered slots which fit wire or sheet metal. The metal or wire is tried in the various slots until it just fits without being forced.

THE HISTORY OF POZZI ORTHODONTIC SILVER SOLDER

The Pozzi family has been manufacturing silver solders since 1934. From the melting of different alloys, including 65% of the purest silver, up to the making of rough bulk ingots, the quality control has been consistent, and the resulting product is remarkable. Of course, our solder does not have any cadmium or any other impurities. The rolling of the rough ingots to obtain square and round wires takes at least fifteen steps. The lamination is done with the most precise

gauged rolling mill in the industry. The high content of silver in our orthodontic solder means that very little material is needed in the soldering process, and the possibility of oxidation is nearly eliminated. Solders with a low silver content tend to oxidize heavily due to impurities. The combination of the ingredients in our silver solder and the high quality flux make this product the very best available in the world market.

Silver Solder

Pozzi® Malibu™ Orthodontic Laboratory Silver and Brazing Solder

CADMIUM & NICKEL FREE

A cadmium-free alloy with free flowing and ductile characteristics. Easy to use. Manufactured in the U.S.A. for the Pozzi brand.

- 1 Good strength and ductility on nickel alloys to help avoid stress corrosion cracking.
- 2 Good color match on stainless steel.
- 3 Excellent fluidity that promotes penetration for good strength and elongation.

iNMAN Power Component Kit

For the fabrication of low-cost distalization appliances, the Inman Power Component sets the standard in the application and control of distalization force.

Now any quality laboratory can offer their customers appliances that are simple to adjust, completely controllable and are comfortable for patients. The Inman IPC provides all the necessary components to make an endless variety of quality appliances. With the IPC kit, 5 distalizers or a combination of distalizers and e-arches can be fabricated. The IPC's compressed coil spring provides an easy-to-adjust force controlled by a unidirectional sliding lock. The lock can be advanced 1-mm "click" at a time for accurate, predictable activation. The concept and function of the IPC is simplistic beauty and allows adjustment by the patient or patient's guardian, making it a very efficient appliance choice. In appliance fabrication, time is money, and with the Inman IPC, you will spend less time to make a quality product.

The Inman Power Component is sold as a kit, or you can purchase all the individual parts separately.

E-ARCH

Ideal for transverse expansion of maxillary and mandibular arches where patient compliance is a concern. A tube-like framework is located on half of the arch, which is connected to the IPC on the opposing side.

IPC DISTALIZER W/ NANCE BUTTON

This appliance provides effective distal molar movement and limits mesial movement through the incorporation of a Nance button. The IPC extends through tubes to guide the maxillary first molars during distalization.

IPC DISTALIZER

USING TRANSVERSE EXPANSION

Transverse expansion and molar distalizer in one appliance. Trombone components add support during expansion and eliminate the need to cut any wires or supports before activating the Distalizer IPC components.

**MIN - \$35.13
PER APPLIANCE**
**MAX - \$50.25
PER APPLIANCE**

**MIN - 5
APPLIANCES PER KIT**
**MAX - 10
APPLIANCES PER KIT**

- The IPC is low profile and extremely comfortable compared to other components available.
- The lock is unidirectional and won't back up
- The IPC may be used for many types of movement, from simple space regainers to advanced 3-way arch development appliances.

USAGE

The infinite number of uses of this simple, dependable component will develop over time, and we encourage you to use your imagination and knowledge to help us discover all of the IPC's potential. Inman Orthodontic Laboratories will work with you on any ideas you may have for the IPC, and we will reward you for documented case results using your designs.

THE FORCES

The IPC compresses coil springs with an easy-to-adjust unidirectional sliding lock. The lock can be advanced 1-mm "click" at a time for accurate, predictable activation.

High-Impact Acrylic Resin & Accessories

Pozzi® Ortho Resin - Cold Cure High Impact - Premium Resin - "Lo-Flo"

Pozzi Ortho Resin is a self-curing, high-impact acrylic that was developed for orthodontic use in making strong and attractive appliances and retainers. The powder is a "Lo-Flo" formulation that will rapidly absorb the monomer and will not slump, flow or run. Plastic thickness and form can be rapidly accomplished because when Pozzi Ortho powder and liquid are sprayed on the stone cast, the acrylic will stay put and even. Pozzi Ortho Resin Kit is supplied with clear powder and pink or clear liquid. Kit contains: 16 oz. powder, 8 oz. pink or clear liquid, dropper, a 3oz. jet dispenser, and instruction sheet.

Plastic Teeth For All Your Lab Needs

Bambino® Teeth

**SPECIAL: GET 10
MIX&MATCH
\$8.37 A CARD**

The Bambino tooth is an aesthetic and functional solution to the problem of the empty spaces left by deciduous teeth.

Made of a copolymer cross-linked resin, this tooth line guarantees impermeability to infiltration of fluids and bacteria, thus preventing discoloration and changing of dimensional character. Studied and developed by orthodontic specialists as a simplified alternative to orthodontic appliances, these teeth are ideal for use as a space maintainer to ensure a correct line of teeth where both articulation and aesthetics are concerned. Use of these teeth in articular rehabilitations allows for proper mastication, which can only be obtained with perfect articular balance. Available in a single mold—upper and lower anteriors and upper and lower posteriors. Mounted on dark plastic blocks in 2 shades: 59 (milk-white), 61 (yellow straw-white).

GROUP/ITEM #	DESCRIPTION	
084-10077*	Justi Bambino Deciduous Upper Anterior Card (1x6)	\$13.50

Unique features

It features resilience, memory and transparency that make it unique in its kind. Its high biocompatibility makes it suitable for clinical use (aligners, splints, retainers).

Versatile

The wide range of thicknesses and accessories allows a versatile use of the MemoClearPro: aligners for dental displacements, restraints, expansions, bruxism, occlusal increases, retainers, splints, etc

Compatible

MemoClearPro fits to most thermoforming machines on the market (vacuum/pressure molding machines) and it is easy to process and compatible with acrylic and light-curing resins.

Prices**

Activation small, medium & large

The most sophisticated tools for controlling dental movements in the vestibular-lingual direction. The tiny design of Activation pliers allows the orthodontist to operate in the tiniest areas of the aligner for an unlimited series of interventions. With Small, activation points can be created in the lower incisors area; with Medium the movements in the upper laterals and the torque can be controlled; while cuspids and centrals are managed by using Large. Remember this basic rule: before creating activation points and lines, you must neutralize the black hole area by using Flattening, Spacing, with the "waxing" and "opening" method.

GROUP/ITEM #	DESCRIPTION	
204-001-074/SM	Activation Pliers - Small	\$172.90
204-001-079/SM	Activation Pliers - Medium	\$172.90
204-001-080/SM	Activation Pliers - Large	\$172.90

Vertical for rotations

A design engineered to create activation lines in a vertical direction for optimal rotations control. The couple of forces produced by Vertical, allows greater regularity and speed of movement.

GROUP/ITEM #	DESCRIPTION	
204-001-086/SM	Vertical Pliers - Small	\$172.90

Torque Small

The torque control in the front dental segments in patients wearing aligners, has always been a problem for orthodontists. Now it is possible with the help of Torque Small and Large. The special tip design, creates an elongated shaped activation point for better movement control.

GROUP/ITEM #	DESCRIPTION	
204-001-082/SM	Torque Pliers - Small	\$172.90
204-001-083/SM	Torque Pliers - Large	\$172.90

Lateral to open and close spaces

It creates activation points for dental movements in a mesial or distal direction. Lateral has a design that fits to the proximal surface of the tooth for movements optimal control.

GROUP/ITEM #	DESCRIPTION	
204-001-076/SM	Lateral Pliers	\$172.90

Retention to make hooks

If the aligner is not stable, you don't get the patient's collaboration, the forces are not optimally transmitted, and you will have to make a new aligner. No longer now! With Retention you can create Adams clasps directly on the aligner. Choose the value corresponding to the size of the hook you want to make, on the graduated scale, and in a few seconds of thermoregulation, your aligner will be perfectly adherent to the dental arch.

GROUP/ITEM #	DESCRIPTION	
204-001-073/SM	Retention Pliers	\$ 172.90

The Hydrocolloid Alginate

WHILE THE COMPETITION CONTINUES TO TEST...
WE MAKE PERFECT IMPRESSIONS!!

HIGH PRECISION ALGINATE FOR IMPRESSIONS WITH CHROMATIC PHASE INDICATOR

120 HOURS PLUS CASTING

Thirty years ago we were the first to introduce a chromatic alginate to the United States, and now in our European facility, we are manufacturing an alginate designed for dentures, crowns, bridges and orthodontics, with these unique features:

Dimensional Stability—more than 120 hours (after washing, rinsing and removing excess water by shaking, impression must be placed in a Ziploc® bag.)

Pleasant Scent—Patients like the pleasant vanilla scent, which has a neutral taste.

Chromatic Phases:

- Violet (mixing—approx. 35 sec.)
- Rose (packing/working—approx. 40 sec.)
- Light Blue (setting—approx. 45 sec.)

The impression is complete in just about 2 minutes.

- Final impression is light blue for easy reading
- Lead and cadmium free
- Very low dust
- Bio-compatible
- Meets ISO 1563 and ADA #18
- Easy removal—high tear strength
- Four-pound package includes: 4 1 lb bags and 2 measuring cups
- 6-year freshness date
- Antimicrobial

CHROMATIC PHASES
MIXING 35 Seconds
WORKING/PACKING 40 Seconds
SETTING 45 Seconds

Hemostat has a recessed holding hook that prevents tearing of either the ligature or elastic.

GROUP/ITEM # DESCRIPTION
007-8-605-004 Hemostat / Forcep Mosquito Hook Tip
\$154.29

Rose Torquing Pliers

Rose Torquing Pliers wide with key .018 x .022. Designed to place torque in a specific section of archwire (single tooth) without distorting the remainder of the wire. The key is designed to torque the section between holding beaks - the torqued section will not extend past the contact points of the pliers beaks and will engage easily without transfer of torque to adjacent teeth. Labial torque and lingual torque can be placed next to each other with ease. Works with all arch wires.

GROUP/ITEM # DESCRIPTION
007-OM-805W Rose Torquing Pliers Wide with key
\$126.79

Pozzi Wire Benders

Andresen

Use for precise bending and making loops for light wires.

GROUP/ITEM # DESCRIPTION

GROUP/ITEM # DESCRIPTION
007-8-603-096 Heavy Duty Lab Pliers
\$135.94

We wanted to manufacture a pliers like the ones you used to be able to buy in the old days - without having to mortgage the farm!

We feel that once you use one of these pliers you will know why it is a real classic!

All of the "Classika" instruments are made of corrosion resistant stainless steel. All "Classika" cutting instruments have tool steel inserts. All "Classika" cutting instruments have diamond-honed cutting edges and have a hard chrome finish. They withstand all accepted methods of sterilization.

All "Classika" instruments have a balanced assembly wobble-free sliding lock joint. No more shim joints to deal with. All come with extended "sure grip" handles and are guaranteed to be free from manufacturing defects. Any instrument that proves defective in workmanship and materials will be repaired or replaced at our discretion free of charge. All instruments carry a two year warranty.

Black Hard Wire Cutter

Specially designed for cutting hard wires. The cutting angle is 15 degrees and the cutting edges have been diamond-honed to allow hard wire cutting. Maximum cutting capacity is .20 diameter in hard wire.

GROUP/ITEM #	DESCRIPTION
040-40-0015	Black hard wire cutter \$181.19

Flush Cut Distal End Cutter with Safety Hold

The particular design of this cutter allows distal end arch wires to be cut in the patient's mouth safely. It cuts wire and then "safety holds" the loose wires.

Maximum cutting capacity: rectangular wire up to .022x.028" (0,56x0,71mm); round wire up to .020" (0,51mm); twist wire up to .016" (0,41mm) in diameter.

GROUP/ITEM #	DESCRIPTION
040-40-0017R	Distal end cutter \$181.19

Miniature Pin & Ligature Cutter

This standard pin cutter is non-angled and designed to cut soft wires. This pliers is very popular for chairside work. Maximum cutting capacity is .015 in soft wire.

GROUP/ITEM #	DESCRIPTION
040-40-0016	Miniature pin and ligature cutter \$181.19

Micro-Miniature Light Wire Cutter with Stop Screw

This pliers is designed as a miniature ligature cutter that will cut soft wire. It easily reaches those hard-to-reach areas in the mouth. It has a factory adjusted stop screw that prevents tip damage due to overscrewing the cutter during routine procedures. Maximum cutting capacity is soft wire up to .012 in diameter.

GROUP/ITEM #	DESCRIPTION
040-40-0018	Micro-Miniature cutter \$181.19

15° Pin & Fine Wire Cutter

The tip is angled 15 degrees for better field vision. The tooled steel inserted tips have backing ledges for greater strength. Maximum cutting capacity is .015 diameter for both soft and hard wire.

GROUP/ITEM #	DESCRIPTION
040-40-0014	15 degree pin and fine wire cutter \$181.19

Pozzi Tube Crimping Pliers

Stainless Steel Crown Cutting Tools

Small Straight Scissors

Use for trimming anterior crowns.

GROUP/ITEM #
040-40-0028
\$140.28
